

No.	Strategy	Leading Indicators	Project
1.1.10	Encourage schools to increase the number of graduates that are college and career ready.	<ul style="list-style-type: none"> • % of graduates that score a level 3 or higher on AP exams • % of graduates that score a level 4 or higher on IB exams • % of graduates that earn at least 3 hours of dual credit • % of graduates that earn an industry recognized professional certificate/license • % of graduates that need remediation at the postsecondary level 	

Given the information above, SBOE Staff recommends removing the leading indicator “% of students tested that score level 3 on AP exams/level 4 on IB exams” from 1.1.9 since we include it here in 1.1.10.

The goal of 1.1.9 is to encourage more participation of higher-level courses and not necessarily look at the scores of those students participating. Now some correlation between participation and scores would be good to look at because we don’t want students taking courses that they are unprepared for, but the scores indicating college/career readiness aren’t necessarily indicative of increased participation as stated in goal 1.1.9.
